

Enterprise CIB Revenue Management & Billing Platforms

Deep Technical and Financial Comparison: Oracle ORMB vs. InvestCloud AdvantageFee

PREPARED FOR

Senior Managing Directors & Executive Board

DOMAIN SCOPE

Custody, Fund Accounting & Collateral Systems

TARGET ARCHITECTURE

Tier-1 Institutional Framework (Bank of America Scale)

Executive Core Architecture Summary

Operational paradigms designed for unique structural requirements

ORACLE ORMB PARADIGM

Designed as a heavy, multi-threaded sub-ledger transactional grid engine. It is optimized to ingest raw, unaggregated, high-volume event data straight into low-level database structural staging architectures.

Core Focus: High-velocity transactional scale, global statutory taxation compliance, multi-currency processing loops, and dynamic operational banking balance offsets.

INVESTCLOUD ADVANTAGEFEE PARADIGM

Engineered as an event-driven, API-first balance-and-valuation framework. It leverages unified orchestration loops to apply rule-based configurations onto pre-aggregated asset snapshots.

Core Focus: Asset-servicing rules, multi-tier legal structures, advanced performance hurdles, automated operational exceptions, and responsive management dashboards.

Oracle ORMB: Production Sub-Ledger Layout

Back-Office Interface Blueprint (Banking Control Central & Transaction Monitors)

```

The ORMB interface functions as an analytical sub-ledger framework. Raw transaction arrays are compiled directly through low-level engine views (*CI_TXN_IN*) where volume-tiered parameters match against institutional parent umbrellas.

InvestCloud AdvantageFee: Operations Dashboard

Institutional Framework: Master Group Umbrella Tree |

- Asset-Under-Management Allocation (AUM): \$14,290,500,000 |

- Programmatic Performance Hurdle Rule: 15% Over HWM Index |

- Automated Net Invoiced Calculations: \$2,410,500.00 [VIEW TEMPLATE / PRE-DELIVERY SIGN-OFF] |

+-----+

The AdvantageFee platform prioritizes high-level process exception management over tabular logs. It focuses on identifying valuation gaps and structural drift anomalies across asset profiles to prevent invoicing errors before presentation.

Deep Technical Feature Alignment

System capability comparisons across core institutional workflows

WORKFLOW MODULE	ORACLE ORMB INFRASTRUCTURE CAPABILITY	INVESTCLOUD ADVANTAGEFEE INFRASTRUCTURE CAPABILITY
Custody Clearing	Processes millions of daily trades via staging frameworks. Applies precise volume tiering and dynamic per-trade billing parameters.	Ingests monthly aggregated transaction volumes. Applies tiered rates to valuation states rather than raw execution streams.
Fund Accounting	Acts as an independent sub-ledger, matching general ledger data entries against custom corporate accounting matrices.	Natively maps nested legal structures, including Master-Feeder allocations, distinct asset classes, and complex performance fees.
Collateral Engines	Tracks volatile margin balances using automated sub-second transactional calculation loops.	Applies structural fee metrics to position balances captured at designated month-end reporting marks.
Accrual & Balance Control	Calculates Earnings Credit Rate (ECR) offsets from transactional balance pools using precise day-count conventions.	Performs real-time fee accrual calculations, allowing operational teams to run predictive revenue projections.

Commercial Realities & Integration Footprint

Total Cost of Ownership (TCO) parameters and strategic deployment logic

ORACLE ORMB COMMERCIAL PROFILE

- **Annual Subscription:** \$1,500,000 – \$3,500,000+ (scales by processor capacity and transaction volumes).
- **Integration Multiplier:** **2.5x – 4.0x software license fees** (requires specialized database orchestration and custom data staging logic).
- **System Dependency:** Deeply integrated with Oracle tech stacks (OCI, WebLogic, WebCenter).

INVESTCLOUD ADVANTAGEFEE COMMERCIAL PROFILE

- **Annual Subscription:** \$800,000 – \$2,000,000 (calculated by managed asset scale or transaction tiers).
- **Integration Multiplier:** **1.0x – 1.5x software license fees** (uses standard integration layers and out-of-the-box templates).
- **System Dependency:** Ingests standard JSON payloads and multi-custodial data streams cleanly.

Strategic Advisory Recommendation: For Tier-1 environments like Bank of America, these solutions should be deployed according to line-of-business architecture requirements. Implement **Oracle ORMB** within the Global Corporate Banking division to process high-volume payment processing, transactional cash operations, and enterprise balance clearings. Implement **InvestCloud AdvantageFee** within the Asset Servicing, Trust Administration, and Institutional Fund Management divisions to leverage its rule-based fee logic, exception tracking, and modern client interface panels.
